DETAILED ACTION

1. This communication is responsive to the Appeal Brief filed on 11/13/2006.

Prosecution Reopened

2. In view of the Appeal Brief filed on 11/13/2006, PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

Claim Status

3. Claims 1-41 are pending. Claims 1-4, 7-10, 14-20, 23-26, 30-32, and 35-38 are rejected as detailed below.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-41 are rejected on the ground of nonstatutory double patenting over claims 1 and 13-17 of U. S. Patent No. 7,103,740 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: The following table shows the claims 1-41 in the instant application "10/750,597" that are rejected by corresponding claims 1 and 13-17 in US Patent 7,103,740.

Claims Comparison Table

10/750,597

7,103,740

Claims 1-41

1 and 13-17

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application, which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804. Nevertheless, to further expedite prosecution of this case, the examiner invites the applicant to file a terminal Disclaimer to overcome this Double Patenting Rejection.

Allowable Subject Matter

5. Claims 1-41 are allowed providing that applicant submits a terminal disclaimer.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of records fails to disclose, a multi-class storage mechanism configured to compress data migrated to storage classes in a hierarchy of storage classes to generate access information for data according to a set of policies in addition to modifying the file system metadata for the migrated data to indicate the different storage classes for the migrated data, wherein path information in the file system metadata exposed to applications is not modified in combination with the file system software is configured to add new storage classes according to the set of policies and increase the capacity allocated to a storage class on a storage device within the storage class wherein the migrated data remained online with the multi-class file system.
